

PalletPal Walkie Mobile Leveler

The PalletPal Walkie is an automatic spring actuated level loader that works in tandem with your existing powered walkie or rider pallet trucks. The PalletPal Walkie works with all standard electric walkie and walkie/riders.

How To Use It For Order Picking

A worker simply drives the pallet truck into the PalletPal's built in fork channels (flared ends in fork channels make lining up the forks simple). An empty pallet is positioned on the skid resistant platform. The worker does the same job he has always done except, the platform is at a comfortable height which can be loaded easily with no bending or stretching. As more items are added the Walkie's spring compresses to lower the platform while keeping the top level at a comfortable, ergonomic height.

PalletPal Walkie Features:

- Automatic Height Adjustment - Spring mechanism responds to load
- Requires no electrical power
- Platform accommodates all types of pallets and skids including GEO and half pallets
- Platform recesses and narrow base pads allows workers to get closer to the load

Pallet Truck Sold Separately

Model Number	Capacity	Low Height	Raised Height	Platform
PalletPal Walkie	400 - 2500 lbs.	9-13/16 in.	31 inc.	38" x 45"
