

## Case Turning

The angled rollers direct the boxes to the edge of the conveyor. The boxes then turn as they hit the case turner.

## Merging

This system properly merges and orients packages of a variety of sizes and shapes, accommodating several infeed lanes from a variety of merge angles. The spinning rollers direct the products to the conveyor edge.

## Depalletizing

Handles a variety of case shapes and sizes as they move from pallet to belt – cases are removed in groups rather than one-by-one. The speed and consistency of this system is ideally suited for robotic loading applications.

## Center Line Merge

The two side-by-side angled roller belts direct products to the belt's center.
