100-57B Automatic Bag Palletizer

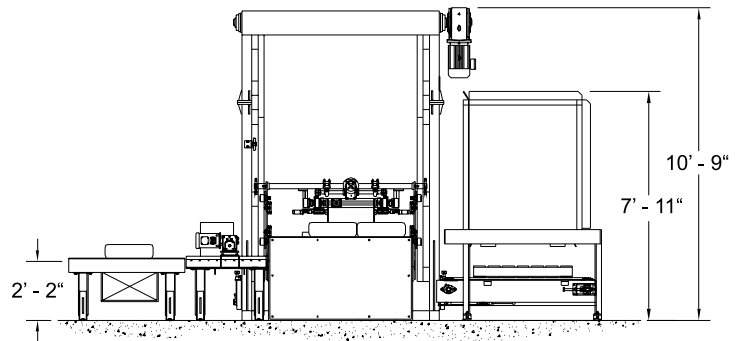

### Description

The 100-57B is designed to automatically palletize full bags onto a pallet or slip sheet. Operations are performed at floor level. Up to ten bags per minute can be handled.

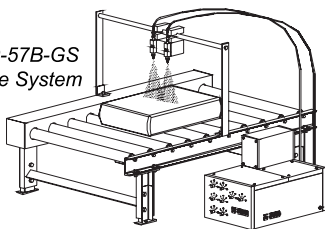

### Operation

Empty pallets or sheets are stored in a magazine and dispensed into position for bag placement. A power infeed conveyor stages bags prior to orienting. An elevating table lifts bags and rotates them to form the required tier pattern. Bags are then transferred to a stripper plate with push bar. The stripper plate raises to discharge height and places formed layer on a pallet or sheet. Full pallets are discharged for removal by fork truck.
