RM-1500 Stacker Crane

Features

- Automatic operation
- Minimal floor space required
- Complete cycle in less than 1 minute
- Handles a wide range of load sizes

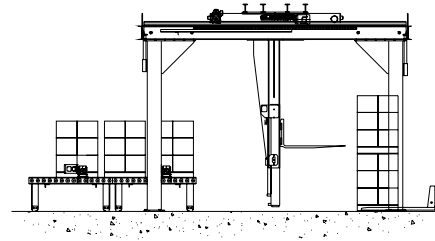

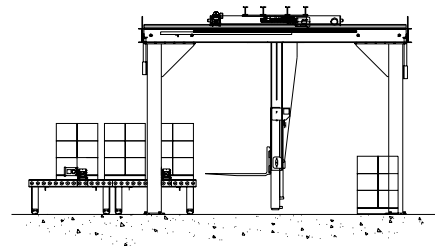

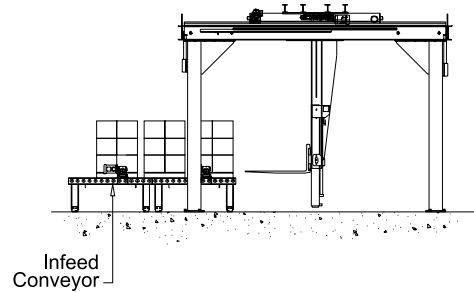

Description

The RM-1500 Stacker Crane is an economical alternative to a fork truck for repetitive material handling operations. Pallet loads weighing up to 4,000 lbs. can be transferred from the conveyor to the floor for handling with pallet jacks. Loads can also be double stacked.

Operation

First, palletized product is positioned on an infeed conveyor for pick up. Next, forks extend into pallet and lift it from the conveyor. The load is then rotated 180 degrees and placed on the floor. The forks retract and return to home position.

Sequence of Operation
