PAC-TRAK™

Towline Conveyor System for Paint Lines & Assembly Lines

PAC-TRAK™ from PACLINE

Towline Conveyor Systems

Paint line application

HIGHLY EFFICIENT HANDLING FOR A WIDE RANGE OF PRODUCTS

- The standard four-wheeled cart is propelled by a drive chain.
- The system can be mounted "in floor" or "on floor" with minimal cross section height.
- Platens can be rotated manually for easy access to all sides by operators.
- Platens can also be rotated automatically for close-packing in accumulation zones.
- Capacity is scalable from 1 lb. to 30,000 lbs. on the same conveyor.

TOUGH, RELIABLE CONVEYOR CHAIN AND TRACK

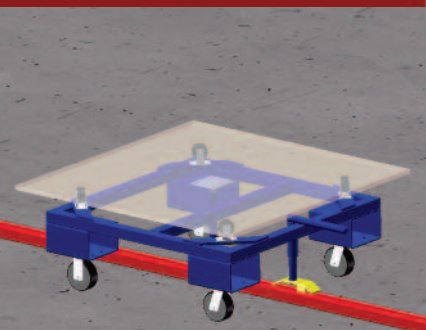

- PACLINE PAC-TRAK™ towline system uses reliable conveyor chain with ball bearing wheels instead of "link" chains to reduce wear and eliminate maintenance.
- Curves are hardened to increase wear resistance.

CUSTOM DESIGN FEATURES

- The PAC-TRAK™ cart can be fitted with top platens of various sizes and can be custom designed based on the size, shape and weight of the products carried.
- The PAC-TRAK™ track system can be custom designed to accommodate your specific paint line or assembly line requirements.

Hardened chain with low-friction bearings

Carts are customized to each application

Track mounted in-floor

Custom platen with rotator
