

# THE TOWLINE APPROACH

## for woodshop automation

For handling large or heavy items that are difficult to hang and for items that do not require painting on the underside of feet or supports.

- The towline system can handle items that are awkward and extremely heavy.
- Track can be mounted in-floor (flush with the floor) or on-floor surface.

- Carts can stop, start or accumulate at specific points along the line.
- Top platens on carts can be set up to rotate manually or automatically.
