Pallet Squaring System Model LP-3000

Phone: 724-658-4516 ▪ Fax: 724-658-5100 ▪ E-Mail: ncco@newcastleco.com

Features

- **Completely automatic**
- **Squares stack up to 20 pallets**
- **Complete cycle in less than a minute**

Description

The LP-3000 is designed to square stacks of pallets prior to entering or exiting an automated system.

Operation

Stack of pallets is loaded into the system with a fork truck or infeed conveyor. Next, two side squaring plates cycle in to square the stack. Then, the front squaring plates cycle in to square front side of stack against back plate. The squaring plates retract and the stack is removed with a fork truck or discharged to conveyor.
